Profile

In the ever changing IT industry I have fulfilled many roles. Starting as a software engineer, designer and architect at Capgemini, I have learned the magic of software development from multiple angles. I have practised my passion for solid product development and efficient delivery by stimulating teams to make smart choices throughout the development cycle. Initially based on waterfall and later fully focussed on the flexible agile approach.

The agile way of working suits me very much. To dare to experiment and adapt along the way while continuously improving and delivering result is a most interesting game. Challenging for development teams but even more for companies as a whole. The massive change faced by transforming companies is often difficult, frustrating even, but when done properly highly rewarding. In this playing field I am at my best.

In the past 6 years I have been involved in the agile transition processes of a bank and an airline. I have advised management and coached scrum development teams operating in the heart of the change.

Work experience

Scrum master, Agile coach, Delivery Lead @ Air France KLM (5 years)

As a scrum master of multiple joint Air France KLM teams I have worked on the e-booking web system (finding flights) and the innovative Wi-Fi on board product. At the same time, as a delivery lead, I was responsible for delivering the software changes created by the teams to the production environment. In the case of the Wi-Fi on board product, a delivery process was to be invented to load software on board of the aircrafts in collaboration with technical avionic engineers and connectivity suppliers amongst which Panasonic and Gogo. The team developed a competitive supplier independent platform enabling multiple touchpoints (applications) to use connectivity on board agnostic to supplier specifics. I have guided the teams and the suppliers to approach this challenge the agile way.

In parallel I acted in a leading role in the Air France KLM 'Scaling Agile' program as a representative for product teams going through the agile transition. Main task here was to support the organisation in enabling product teams to become self-steering and independent as well as enabling company wide portfolio management using SAFe as the guiding framework.

➤ **IT Team lead, Manager Application Management, Scrum master
@ Crédit Agricole Consumer Finance (3.5 years)**

The first 7 months of my assignment at Crédit Agricole I led the software development team (15 fte) and reported to the ICT management. Main challenge was to professionalise the development and maintenance processes and balance the team competences to enable the launch of a new customer self-service product.

As the company was reorganising and new departments were introduced, I temporarily took over the role of the manager of the 'Application management – front office' department (9 months) extending my tasks with HR and restructuring the ICT department. While doing this I started the redesign of the software development process from a Rational Unified Process (RUP) to a scrum driven process.

After handing over my managers role I guided the first scrum teams as a scrum master and acted as an agile coach for management.

➤ **Technical team lead, Designer
@ NUON/Alliander (8 months)**

Alliander is an energy network company dealing with energy transport and distribution in the Netherlands. During my assignment Alliander was replacing old analogue energy meters for smart digital meters. As a technical team lead of a (Java) development team I have delivered various webservices to expose meter readings to energy suppliers like Nuon.

My main tasks were based on the Rational Unified Process (RUP) disciplines "requirements"; to bring existing use cases to a ready-to-implement state, "analysis and design"; assist in setting up the software architecture document and "management"; estimate work, set priorities for the team and manage time. In addition I assisted in maturing the development and delivery process used in the construction phase of the project.

More:

Software architect, engineer @ Wolters Kluwer

➤ **Lead design, software engineer @ ING bank Netherlands ICT
Technical team lead @ F. van Lanschot Bankers**
